

Dimmer and Light for poultry houses

For Light Bulb or Tube

Complete Controller for light system in poultry houses which generates a „sunrise, daylight, and sunset“.

For better performance and health for your animals.

For easy and fast installation the unit includes a waterproof housing (IP65), a dimmer, timer, bypass and main switch. Each single component is also available separately for creating your own, individual solution.

Optional: Light sensor for constant Brightness control

The components are proper installed and very easy to operate.

max. brightness:

the maximum brightness of the light is infinitely variable from 0% up to 100 % adjustable.

Time for dim interval:

The time for „sunrise and sunset“ can be adjusted infinitely variable from 1 minute up to 60 minutes.

An additional relays is also included e.g. for using not dimmable energy saving lights (second Light).

On customer request we realize individual solutions and Light- programs.
